Sequence 7, Application US/09171482A

Patent No. 6184449

GENERAL INFORMATION:
A 1-AMINOSYCLOPROPANE-1-CARBOXYLATE SYNTHASE GENE FROM
TITLE OF INVENTION: ROSA TO CONTROL ETHYLENE LEVELS IN ROSES
FILE REPRENCE: TAGAWA-ROSE
CURRENT APPLICATION NUMBER: US/09/171,482A

CURRENT APPLICATION NUMBER: PCT/US97/17644, Published under WOS8/14465; US5,824,875

EARLIER FILING DATE: 1997-Sept-30, Published 1998-April-09; 1996-Oct-01

SOFTWARE: Word Perfect 6.1

FINGEN OF THE NOTE O
PATENT OF STATEMENT ON US/24194

BREERAL INFORMATION:

APPLICANT: RANU, RAJINDER S.

TITLE OF INVENTION: SYNTHAME GENES FROM PELARGONIUM TO CONTROL ETHYLENE LEVELS

TITLE OF INVENTION: SYNTHAME SINCH STANDIUMS

TITLE OF INVENTION: IN GERANIUMS

NUMBER OF SEQUENCES: 13

CONDESSEE: SANTAMGELO LAW OFFICES PC

STREET: 315 WEST OAK STREET, STE 701

CITY: FORT COLLINS

STATE: CO

| Patent No. 6100044
| GENERAL INFORMATION:
| GENERAL INFORMATION:
| APPLICANT: EVANS, Herbert J.
| APPLICANT: KINI, R. Manjunatha
| TITLE OF INVENTION: Polypeptides That Include Conformation-
| TITLE OF INVENTION: Constraining Groups Which Flank A Protein-Protein Interaction
| TITLE OF INVENTION: Site
                                                                                                                                                                                                                                           GENERAL INFORMATION:
APPLICANT: EVANS, Herbert J.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are concentration in cells. The peptides are ghrelin homologues and are characterised in that a least one amino acid has been substituted by a less encompasses the unmodified peptides; the DNA encoding the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptides. The peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptides. The peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with common accompanying side effects. The present sequence represents a ghrelin-like growth hormone secretagogue (GHS) core region sequence.
                                                                                 compounds which induce growth hormone secretion and calcium concentrations, useful in treatment and diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ghrelin-like growth hormone secretagogue (GHS) core region peptide #1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       .;

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are concratation in cells. The peptides are ghrelin homologues and are concratised in that at least one amino acid has been substituted by also encompasses the unmodified peptides; the DNA encoding the peptides, cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide. The peptides of the invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases comprising they are useful for treating and/or diagnosing diseases concreted by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with compounds of the invention are safe with the present sequence represents a ghrelin-like growth hormone secretagogue (GHS) core region sequence.
                                                                                                                            New peptide compounds which induce growth hormone secretion and elevate cell calcium concentrations, useful in treatment and diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ghrelin-like growth hormone secretagogue (GHS) core region peptide #2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel peptide compound or its salt which CC induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are concentration in cells. The peptides are ghrelin homologues and are concentration in cells. The peptides are ghrelin homologues and are concentration in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention concentration are calls comprising such DNA; a method of producing the peptides; the DNA encoding the peptides; competides comprising recombinant production, optionally followed by concentration; an antibody specific for a peptide of the convention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases concentration; and deficiency in growth hormone expression or activity. In construction, they are useful for promoting infant growth due to growth consended by a deficiency. The compounds of the invention are safe with consended and companying side effects. The present sequence represents a consequence.

The period of the invention are safe with the present sequence represents a consequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           equivalents for regulating glycogen metabolism and/or protein synthesis is the subject of the invention. This sequence can also be used in a method of the invention for identifying agents that modulate the activity of PKB. It can also be used to screen for modulators of enzymes that catalyse PKB phosphorylation. PKB (an insulin-stimulated crosstide kinase) and its analogues etc. are used to treat disease characterised by abnormal glycogen metabolism and/or protein synthesis, especially type II diabetes and cancer (specifically of breast, pancreas and ovary). The various screening methods are used to identify agents potentially useful for treating these diseases.
This sequence represents a peptide motif derived from ferritin which important for selective binding affinity. Peptides containing motifs such as this may be used as functional surrogates in the conjugate of
                                                                                                    Labelled functional surrogate of an analyte - useful as competitor molecule in affinity assays, esp. for detecting large macromolecules such as ferritin
                                                                                                                                                                       WPI; 1997-077284/07

the invention. The novel labelled conjugate comprises at least one label attached to a functional surrogate of an analyte of interest.

C The surrogate is capable of competing effectively with the analyte of or a limiting amount of an affinity receptor for the analyte. The conjugate exhibits an activity that is altered upon interaction with the affinity receptor and this activity can be measured and related to the analyte present in a sample. Functional surrogates compete effectively and with the analyte for a limiting amount of its such as this have an immunoreactive group that allows the surrogate to such as this have an immunoreactive group that allows the surrogate to affinity receptor. Functional surrogates are able to mimic naturally corruring analytes. They can be labelled for use in standard competitive affinity assays (sp. homogenous immunoassays) for detecting large maromolecules such as polypeptides, polysaccharides, polynuclectides, clycoproteins and lipid-containing macromolecules, as well as small haptens. Typical diagnostic analytes for detecting include cardiac or analytes associated with infectious disease. In particular, the assays create useful for detecting ferritin, parathyroid hormone, human considered with increasing hormone, numan conting macromic gonadotropin, human luteinising hormone, yethong cannot strus, DK-MB, myosin light chain, troponin, carcinoembryonic antigen, way calpha-fetoprotein, prostate-specific antigen and califormarker).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .

Growth hormone secretagogue; GHS; ghrelin; core region; calcium concentration elevation; infant growth disorder; growth hormone deficiency. 24-JUL-2000; 2000WO-JP04907 Bos taurus. Gallus gallus. Anguilla japonica. Oncorhynchus mykiss. Rattus norvegicus, WO200107475-A1. Sus scrofa. 01-FEB-2001.

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion cludes the secretion of growth hormone and/or elevates calcium ion cludes to concentration in cells. The peptides are ghrelin homologues and are caracterised in that at least one amino acid has been substituted by also encompasses the unmodified peptides; the DNA encoding the peptides comprising recombinant production, optionally followed by the invention, and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases the invention are useful for treating and/or diagnosing diseases particular, they are useful for treating and/or diagnosing diseases particular, they are useful for promoting infant growth due to growth connent deficiency. The compounds of the invention are safe with common deficiency. The compounds of the invention are safe with a accompanying side effects. The present sequence represents a ghrelin-like growth hormone secretagogue (GHS) core region sequence. ô antibody; monoclonal; chimaeric; grafted; humanised; IL-2; interleukin-2; cytokines; interleukin-2 receptor; 55kD beta chain; activated T cells; T cell mediated disease; graft versus host disease; transplant rejection; autoimmune diseases; chemotherapy; immunosuppressants; T cell typing; diagnosis; testing; detection; ss. Gaps Heavy chain CDR3 region for humanised anti-IL-2 receptor antibody. Human interleukin-2 receptor antibodies - useful for treating and preventing T-cell mediated diseases e.g. graft versus host disease, transplant rejection etc. .. o Length 7; 0; Indels 100.0%; Score 20; DB 22; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents the heavy chain CDR3 region from rat monocle antibody YTH 906.9.25 which binds to the 55kD beta-chain of the II-2 receptor on activated T cells. The encoding DNA was used in the construction of humanised anti-II2 receptor by PCR methods using CAMPATH-1H L chain as light chain template, and a humanised anti-CD4 heavy chain as a template. The humanised anti-II2 receptor Ab can be used in the treatment of T-cell mediated diseases eg. graft versus he disease, transplant rejection, and various autoimmune diseases. It may be administered alone or with chemotherapeutic or lamunosuppressive agents. In addn. it can be used for T cell typing, to isolate specific II-2R bearing cells and for diagnosis.
        The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are characterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptide also encompasses the unmodified peptides; the DNA encoding the peptide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are characterised in that at least one amino acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides; vectors and host cells comprising such DNA; a method of producing the peptides comprising recombinant production, optionally followed by chemical modification; an annibody specific for a peptide. The peptides invention; and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide of the invention; and an assay and kit for detecting the peptides. The peptid of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with no accompanying side effects. The present sequence represents a ghrelin-like growth hormone secretagogue (GHS) core region sequence.
                                                                                                                                                                                                    New peptide compounds which induce gelevate cell calcium concentrations, of infant growth disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 growth hormone

A set of peptide ligands consisting of specific complementary peptides to proteins encoded by genes of the human genome, useful in an assay for screening and identifying of one or more novel peptides which are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a set of complementary peptide ligands generated from the human genome. The complementary peptides interact with their relevant target proteins encoded in the human genome. They can be used as reagents in drug discovery and as lead ligands to facilitate drug design and development. The present sequence is a complementary peptide provided in the specification.

caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with no accompanying side effects. The present sequence represents a ghrelin-like growth hormone secretagogue (GHS) core region sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The peptide, which can be isolated from the ganglion of Helix pomatia or can be synthesised, has the activity to improve muscular contraction, as demonstrated by tests using anterior byssus retractor

                                                                                                  generated from the human genome. The complementary peptides interact with their relevant target proteins encoded in the human genome. They can be used as respents in drug discovery and as lead ligands to facilitate drug design and development. The present sequence is a complementary peptide provided in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a set of complementary peptide ligands generated from the human genome. The complementary peptides interact with their relevant target proteins encoded in the human genome. They can be used as reagents in drug discovery and as lead ligands to facilitate drug design and development. The present sequence is a complementary peptide provided in the specification.
                                                                                                                                                                                                                                     A set of peptide ligands consisting of specific complementary peptides to proteins encoded by genes of the human genome, useful in an assay for screening and identifying of one or more novel peptides which are
                                                                                                                                                                                                                                                                                                                                                                               13-DEC-1999;

                                                                                                                                                                                                                                                                                                                        The invention relates to a set of complementary peptide ligands generated from the human genome. The complementary peptides interact with their relevant target proteins encoded in the human genome. They can be used as reagents in drug discovery and as lead ligands to facilitate drug design and development. The present sequence is a complementary peptide provided in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                grug
                                                                                                                                                                                                                                                                                                                                                                                                                                          A set of peptide ligands consisting of specific complementary peptides to proteins encoded by genes of the human genome, useful in an assay for screening and identifying of one or more novel peptides which are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; complementary peptide;

Saccharomyces cerevisiae

```
The invention relates to the identification of complementary peptides by analysis of protein and nucleotide sequence databases from higher eukaryotic genomes, excluding human and plants. The specific complementary peptides interact with their relevant target proteins encoded in the eukaryote genome. The peptides may be used as reagents and drugs for drug discovery and as lead ligands for drug design and development. The present sequence is a complementary peptide from Saccharomyces cerevisiae.
                                                                                                                                                                                                                         Identifying complementary peptides by analysis of protein and nucleotide sequence databases, useful in drug design -

112892 seqs, 41476328 residues

Searched:

Database : SwissProt_40:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
